

The Living Coast Undersea (VR) Experience

Nearly 4000 beneficiaries so far

Our Motivation

I heard a talk which mentioned Beachy Head West Marine Conservation Zone had just been designated & was staggered. I had no idea anything was alive out there, and I wanted to see it.

BIGGEST CHALLENGE - The biggest challenge was fundraising, as always, to get it off the ground.

Achievements

Creating a truly unique project that enables users to experience the Sussex coast's unique marine environment, as if they were diving, & watching people's faces in complete awe as they look around.

Message to the public

KP Projects creates unique, surprising & intriguing outdoor arts performances, installations & community engagement projects to engage the widest audiences with the environment, sustainability & healthy living.

From our Members

- ◆ "Absolutely incredible. Have a massive smile on my face!"
- ◆ "Really immersive, really interesting and fascinating these are all things that are off our seas. Also, easy to book; very good value for money, thoroughly enjoyable"
- ◆ "Very interesting, amazed how technology can help people experience things not achievable in real life"
- ◆ "Amazeballs! It's a wonderful way of sharing the magic of the undersea world. The technology provides a bridge from the scientists and deep-sea divers to the layman and opens up your mind to this amazing coastline"
- ◆ "It was very interesting to see what lies beneath the surface. I have always wondered if we have sharks/jellyfish and now I can see that we do. VR is a great way to learn for visual and kinetic learners"
