**MAKING IT HAPPEN**

Photo below showing some of the young people at our fortnightly 'Teens' group trying different coding challenges!

## Our Motivation

We share digital skills to enrich and improve lives in our community. Digital is becoming an essential part of everyday life, and we want to equip everyone with the access and skills to thrive.

**BIGGEST CHALLENGE** - Having a suitable base for our activities – we partnered with East Sussex College who provided us with a space for over two years, allowing us to search for a more permanent base closer to the heart of our community, where we can more easily help people who are digitally excluded.

## Achievements

We've provided digital skills coaching to over 130 people since moving to our new base in October 2021

We run two free coding and making sessions every week for young people

Giving young people employment and work experience opportunities

## Our Clients

- ◆ We deliver between three and six sessions per week for free to help anyone aged 8+ with their digital skills
- ◆ Over a quarter of the clients we see via our drop-ins are homeless or at risk of homelessness – and we help them get device access by refurbishing and donating devices
- ◆ 46% of the clients we see via our drop-ins are unemployed – and we help them by providing 1:1 coaching on essential workplace-related digital skills

## Message to the public

Digital access and skills are essential. If you have any devices you no longer need, please consider donating them to us so we can pass them on to digitally excluded members of our local community. See more at:
